I wanted to add 2 more USBs via a back USB panel like this one, but when I wanted to connect the header, I discovered that the header on the motherboard is reversed when compared to the standard header.http://carcompanyofcanada.com/fck_upload/c2150-nordictrack-treadmill-manual.xml

- **6via4 manual.**

Heres an image of my motherboards USB header, where you see that its missing pin 10, rather than the usual pin 9. I made a little drawing next to that area so its easier to understand. Are there 2 versions of USB headers on the motherboards. I cant find any information anywhere on the net. Maybe one of you can shed some light onto this. Thanks! 0 comments share save hide report 100% Upvoted Log in or sign up to leave a comment log in sign up Sort by best no comments yet Be the first to share what you think. In addition, separation of nickel ion generated in the reaction was more difficult than that of cobalt ion.Treatment of 2 with thionyl chloride gave 4chloroformylphthalic thioanhydride 3a. The reaction of 3a with phenol and thiophenol afforded 4 phenoxy carbonyl phthalic thioanhydride 3b and 4 phenylthiocarbonyl phthalic thioanhydride 3c, respectively. The reaction of 3a with aniline yielded 4 N phenylcarbamoyl Nphenylphthalimide 6 via 4 Nphenylcarbamoyl phthalic thioanhydride 4. The reaction of aniline with 3b gave 4 phenoxy carbonyl N phenylphthalimide 5b, whereas that with 3c afforded 6 via 4 phenylthiocarbonyl N phenylphthalimide 5c.Login in here. Charge AAs from the sun or any USB port, then power your phone, MP3, GPS, or perk up your tablet in a pinch. The Guide 10 Plus USB Power Pack can be charged by connecting it to any USB power source, including Goal Zero Nomad Solar Panels, a wall USB charger, or car USB charger.Click here to make a request to customer service.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. WBK3 2.0 out of 5 stars This is basically a portable AA or AAA battery charger. While it can, I do not consider this a good option to recharge portable technology like iPhones, cameras, headlamps etc. After several weeks of use and many battery depletion and recharge cycles, I can confirm the product does what Goal Zero says. That's about it though. The battery charge and use indicators work, but are inconsistent. While using this to charge an external device, the battery indicator stays green for awhile, but as soon as it turns orange, it drops to red almost instantly. Not much of a warning. It does charge an iPhone 6 via 4 AAs, however that totally depletes the Goal Zero AAs. It also takes several hours over 4 to recharge the 4 batteries from a standard wall outlet. The charge interface does make recharging batteries via this charger nice I was able to charge it in my car while driving on a road trip. The downsides are, if you are looking for a portable device iPhone, camera, headlamp etc., I'd look elsewhere. You get 1 charge of the device, then it will take you 46 hours to recharge the batteries before you can charge another device. Plenty of smaller portable chargers are available on the market perform far better. But, if you need a portable AA or AAA charger, this is a good product.I must say its performance is quite disappointing.

<http://www.drupalitalia.org/node/72236>

First off, charged it with my Anker 21W solar panels on a clear, sunny day. It took about 8 hours of continued charging before getting a solid green light on the charger. I then followed by plugging my iPad having 22% charge to the recharger. The charge on the iPad when up to 39% at the time the power indicator light went red on the charger. Charged the recharger again, another 8 hours, this time using a USB AC plug. Followed by continue charging my iPad where the last changing session

left off. As with the last charge session the charge on the iPad went from 39% to 55% charge. Once the charge indicator light turns red the charger stops charging. The LED flashlight however, continue working. This product does not charge very well, it takes forever and the battery pack actually drains my Samsung Note8, it does not charge it. The solar connector does not connect to my solar gen to recharge it and I wasted money buying connectors. This product looks cool, sounds cool but what a waste of money. The battery pack it takes forever to charge does nothing for me. I used the device in Thailand on a bicycle tour and it stopped charging about a month into the tour. I'd get a quick green flash then continuously flashing red. I had sent an email to Goal Zero and they sent me a mailer to return the defective unit and sent me a new power pack battery charger. I purchased a second one March 10 from Amazon and used this one as well as the other one on my recently completed 3 month cycling tour of England and Scotland. The one I purchased March 10 from Amazon failed in the 5th week, doing the same thing as the one that failed last year. Get a quick green flash, then red continuously flashing. The charger had been charged fully the night before and worked fine during the day when I needed it to recharge my Garmin Edge GPS bike computer. But then when I plugged the power pack in that evening to recharge, it failed and wouldn't stop flashing red. I will be contacting Goal Zero again.

<http://chougantravel.com/images/bosch-shv55m03gb-manual.pdf>

The charger itself is very loud and makes a high pitched whine that due to the pitch is audible over music through closed doors. The clear plastic cover seems flimsy. The battery backing is metal and seems solid. The rest of the unit is plastic, it does not seem like it would hold up to rough conditions for long. The solar panel works great, and charges the batteries quickly. I like having several ports on the front of the battery pack. I bought this for a specific purpose, which was to have a way to charge my phone with AA batteries. It serves that purpose. A set of new batteries will give my Google Pixel 2 XL 2 full charges at a slightly slower than normal speed. I started with my phone at 68%. It has been 2 hours and my phone is now at 80%. But the charging isn't going smooth at all. Every 30 seconds or so my phone lights up as if it has just been reconnected to the charger. The light on the charger is solid green indicating that there is still plenty of juice in the batteries but for some reason the charging keeps getting interrupted. Is this normal or do I have a defective product. I actually think it is overheating. It seems to get pretty hot when used as a charger and there is no ventilation. If I suck hot air out of the mini USB port allowing cool air to go in, then charging of my phone is no longer interrupted. They should have provided better cooling for the components. Major design flaw. I was using 14w and 10w panels and it seems fried tbh. Sorry, we failed to record your vote. Please try again Ich hab dann einen USB Power Monitor dazwischen geschaltet Ergebnis 200 bis 250 mA Ladestrom, mit verschiedenen Kabeln getestet. Der Ruf von GoalZero geht bei mir gerade den Bach runter. Akkus war den beigelegten von GoarZero b ab ca. 41%, nach 6h waren 85% erreicht, danach dasselbe Verhalten wie beim ersten mal, die max. Nachtrag Update von 2 auf 3 Sterne. Allerdings haben die verwendeten Billigszellen nicht viel Energie abgegeben, da kommen noch weitere Tests.

<http://www.chourouk-voyages.com/images/bosch-shu9955uc-manual.pdf>

Besonders das gleichzeitige Laden und Entladen ist hervorzuheben. Sorry, we failed to record your vote. Please try again Disappointing as it was good. still looking for something that will fit the bill like this Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Fur mich wichtiger ist aber die Stromentnahme und Wiedereinspeisung. Ich habe zwei dieser Packs gekauft und sowohl die originalen GoalZero, als auch Eneloops ausprobiert, das Ergebnis bleibt das gleiche. Die eigentlich vorhandene Spannung und Kapazität wird nicht ausgenutzt. Es ist mir klar, dass das Gerät nicht mehr Spannung als der vorhandene Akku liefern kann, die Leistung ist aber deutlich geringer als in anderen Packs. Ich hatte dieses für eine

OutdoorNutzung vorgesehen, bei der die Akkus durch SolarPanels wieder aufgeladen werden sollten. Mir ist hier schon die Entnahme zu gering. Wo die Kapazität bleibt kann ich nicht sagen. Ich vermute in der verbauten Elektronik, da die alternativen EneloopAkkus tadellos und von mir vorher als gleichwertiges 4erSet vermessen waren. Sorry, we failed to record your vote. Please try again Schade, denn NiMH AA-Akkus habe ich fast immer dabei. Ich werde mich nun für eine LiOnPowerbank Variante entscheiden, da diese auch bis zu 2A an 5V konstant bieten. 5.9.15 Ergänzung Ich erhöhe meine Bewertung von 2 auf 4 Sterne nach weiteren Tests alle Geräte, die nicht mehr als 1A an 5V ziehen werden anstandslos geladen. Ein iPhone 5s kann von anfänglich 10% auf 100 % geladen werden, bei gleichmäßiger Entladung aller 4 Akkuzellen des Guide10. Das oben erwähnte Problem entsteht nur, wenn Verbrauch angeschlossen werden, die mehr als 1A Strom benötigen eben Tablets, etc. Ich habe mich entschlossen den Guide10 zu behalten, und mir zusätzlich eine Powerbank mit 16000mAh zugelegt, die für meine 2A saugenden Geräte herhält.

Sorry, we failed to record your vote. Please try again Ce chargeur est léger, petit, compact, solide, tout mignon; il permet d'emporter toujours avec soi une source sécuritaire d'énergie pour son téléphone ou sa tablette, il vous gratifie d'une petite lampe pour trouver la serrure du premier coup et, en plus, il met à votre disposition des piles AA ou AAA, au choix quand vous en avez besoin. Sans oublier que c'est avant tout un chargeur de batteries rechargeables. Et pour se faire, vous pouvez le brancher sur un panneau solaire, sur la prise USB de votre ordi, ou tout simplement sur secteur en branchant le câble USB fourni sur le chargeur de votre smartphone, de votre Kindle ou tout autre chargeur muni d'une prise USB et affichant une sortie continue de 5V volt en 0,5 zero virgule cinq, 1 ou même 2A ampère. Le pied quoi ! Vous pouvez, de plus, le brancher sur n'importe quel panneau solaire qu'importe la marque pour peu que celui-ci dispose d'une prise adaptée ou en tout cas que le câble soit adapté. Mais si vous avez un 25W, par exemple, il suffit de cacher une partie du panneau sous un tissu opaque pour abaisser la puissance. Tout ceci vaut bien 5 étoiles. Oui, ce chargeur est plutôt imprécis à cet usage. Lorsque la LED s'éclaire de manière fixe c'est que les batteries sont chargées à 80% dicit la doc. Euh, oui mais si je veux quand même les charger à 100%, je m'arrête quand. Il s'avère donc que les batteries ainsi chargées durent moins longtemps. Et ce, même en laissant la charge un moment après l'obtention des 80%. Ah ! Et puis aussi son tarif franchement redhibitoire. Je trouve qu'à 2,5 fois plus cher que je l'ai achetée, voire 3 fois plus à certaines périodes, ça n'en fait pas une véritable affaire. Alors ça, ça vaut bien 1 étoile. D'où la moyenne de 3 étoiles. Petit détail sans importance, en faisant les photos je me souviens de la difficulté pour extraire les batteries de leur logement.

Une fois les batteries insérées dans le chargeur il suffit de tirer sur ce ruban pour les sortir sans gêne. La première fois, alors que ce système n'était pas en place, j'ai fait levier avec un capuchon de stylos BIC sur les piles en plastique, il n'a provoqué aucune rayure. Associé à un panneau solaire il vous rend autonome en énergie pour vos lampe et smartphone perso je le complète d'un panneau solaire de 25W et d'une réserve d'énergie de 60W pour charger mon petit ordi 2 en 1. On trouve donc des chargeurs bien plus efficaces et légèrement moins chers pour un usage plus sérieux pour des batteries de flashes photo par exemple mais dans le cadre d'un voyage sans matériel exigeant, ce chargeur est parfait, bien que trop onéreux à mon goût. Sorry, we failed to record your vote. Please try again Its supposed to give an advantage when used with a Goal Zero panel, but I couldn't see any speed difference over another USB charger I use with the same solar panel. Works, but you're paying a premium. Sorry, we failed to record your vote. Please try again Io lo uso spesso per lunghi Trekking abbinato ad un pannello solare AUKEY da 22W, a pieno sole le batterie originali AA da 2300 mAh le carica in meno di 3h. Sul retro si trovano le istruzioni di carica e i tempi. Garantisce la completa autonomia per i dispositivi elettronici come macchine fotografiche, videocamere e GPS. Inoltre è dotato di luce led utile in qualsiasi situazione di notte, una ingresso mini usb ed uno usb. Assolutamente consigliato. 4stelle perché un po' caro, ma la qualità si paga. Sorry, we failed to record your vote. Please try again Ho dovuto sostituirlo perché non funzionava più correttamente in fase di

carica. Per altri pannelli solari va valutato caso per caso. Sorry, we failed to record your vote. Please try again Die Powerbank Guide 10 Plus ist eine perfekte Ergänzung. Bestens abgestimmt auf das Solarpanel können auf der Tour die Akkus aufgeladen werden. Die Ladung von AA und AAA Akkus ist möglich.

Ein Ladevorgang von AA Akkus dauert je nach Sonneneinstrahlung zwischen 36h. Außerdem verfügt das Guide 10 über einen USB Anschluss an dem ein Handy oder ähnliches angeschlossen werden kann. Wenn man seine Geräte auf AA Akkus ausrichtet und während der Tour das Solarpanel geeignet befestigen kann, kann man gut autark unterwegs sein. Ich bin restlos zufrieden! Sorry, we failed to record your vote. Please try again Gebrauchte oder reparierte Ware oder Rucklaufer. Aus der inneren Verpackung bzw. Plastikschaale ist eine Ecke herausgebrochen. Der Plastikrest befand sich nicht in der Verpackung. Kommt das vom wiederholten Verpacken. Man weiß es nicht. Foto 1 Energie in Form von Strom gehört heutzutage in jeden Fluchtrucksack, besonders dann, wenn man die drohende ZombieApokalypse überleben will. Aber irgendwann sind Batterien und Akkus leer und auch die Powerbank muss wieder aufgefüllt werden. Da viele Tools wie Taschenlampen einen eingebauten Akku haben, kann man sie mit portablen Solarpanelen laden, wenn die Sonne scheint. Dafür hat er zwei Input via USB Mini und Solar Mini Port. Über den USB Mini Eingang kann er natürlich auch mit einer Powerbank, einem PC oder USB Ladegerät Kontakt aufnehmen und den Strom von dort in die eingelegten Akkus transferieren. Über den Standard USB Ausgang können die geladenen Akkus, oder auch normale Batterien, ihre Energie wieder abgeben und z.B. Smartphones wiederbeleben. Um den ersten Test vorzubereiten wurden die mitgelieferten Akkus drei Mal entladen und wieder aufgeladen. Den Vorgang habe ich dann noch mal wiederholt mit dem gleichen Ergebnis. Es dauerte 4 Stunden. An der Powerbank 26000mAh dauerte das Aufladen der GoalZero Akkus 5 Stunden. Die zuvor volle Powerbank war danach um ca. 25% bis 30% entladen. Das Laden von Smartphones und Bluetooth Kopfhörer über normale Discount Batterien ging auch, wurde aber nur kurz ausprobiert. Diese Funktion war für mich kaufentscheidend. Leider ist mein Gerät, wie oben schon erwähnt, evtl.

Sorry, we failed to record your vote. Please try again Come scritto abbinato ad un pannello nomad 7 si carica in 3 ore circa, o similare garantisce in outdoor la completa autonomia per elettronica da viaggio come macchine fotografiche, actioncam, videocamere e gps. Assolutamente consigliato. Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading.
