Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with braun 5375 manual . To get started finding braun 5375 manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

braun 5375 manual

Please read the use instructions carefully and thoroughly before using the appliance. Its proven epilation system removes hair at the root, leaving your skin smooth for weeks. As the hair that regrows is fine and soft, there will be no more stubble. The SoftLift It comes with two different clips It ensures maximum skin contact at the optimum usage position thus enabling more effective hair removal. A reduced number of tweezers and the narrow design, specifically adapted to these body areas, improve the handling and ensure a particularly gentle epilation in these areas. Always use the country specific 12 V transformer plug supplied with this product. This is a normal reaction and should quickly disappear, but may be stronger when you are removing hair at the root for the first few times or if you have sensitive skin. In general, the skin reaction and the sensation of pain tend to. Register your product and get support at QS6161 QS6141. User manual Register your product and get support at HP6581. Veuillez vous adresser a nos Revendeurs en cliquant ICI Powerful steam performances for great results. It should be steady and robust so that you can place the ironing appliance on it. The board should be perforated to allow the steam to pass through the fibres of the fabric to soften it and make ironing easier. The ironing board cover should also be suitable to allow the flow of steam through. <http://ecocarfuerteventura.com/images/editor/craftmatic-adjustable-bed-manual.xml>

- **braun silk epil xpressive 5375 manual, braun 5375 manual, braun 5375 manual pdf, braun 5375 manual download, braun 5375 manual instructions, braun 5375 manual transmission.**

Your iron has a builtin thermostat controlling the temperature very precisely over the entire surface of the soleplate. The thermostat dial contains international markers with dots corresponding to three ironing temperatures. How do I use it As the steam produced is very hot, it softens the fibres and removes creases. Note Never use the vertical steam function on an item being worn by anyone. At the end of your ironing session, we would suggest that once your iron has cooled down, you should wipe over the soleplate and around the steam holes to remove any burned fibers that may have started collecting around the steam holes. We would advise ironing dark clothes inside out and using the correct temperature. If ironing mixed fibre fabrics, set the temperature for the most fragile fibre. Important The iron takes longer to cool down than to heat up. We recommend that you start with fabrics to be ironed at a low temperature. However, it is necessary to regularly perform selfcleaning of the steam generator chamber in order to remove limescale. Never use water containing additives starch, perfume, aromatic substances, softener, etc., condensation water e. g. clothes dryer water, refrigerator water, air conditioner water, rainwater, pure demineralized water or distilled water from store. These contain organic waste or minerals that condense under the influence of heat and cause spitting, brown dripping or premature aging of your device. Warning! Never touch the end of the anticalc valve. Set the thermostat control to Max and the steam control on DRY and switch on. Place the iron on its heel and leave to heat up for around 5 minutes. Unplug the iron then hold your iron horizontally above the sink. Steam, water and scale deposits will leave the steam chamber

through the steam holes and the iron will be clean. At the end of the operation, push the anticalc valve back into position. <http://cq2sc.com/userfiles/craftmatic-1-adjustable-bed-manual.xml>

When your iron is cold, you will also be able to use your vacuum to gently suction limescale and dirt that may have clogged the holes in the soleplate. Cleaning Use a damp soft cloth to wipe your iron and never use cleaners or solvents. If your iron has an autoclean function, refer to the instruction manual before using it. If safety is one of your main concerns, choose an iron that has an automatic cutoff function. Regularly check the water level to ensure that there is always enough. It is okay to use or store the iron even with a small amount of water remaining. When storing, please remove as much water as possible and store in an upright position. Warning The use of iron cleaner will cause damage to your soleplates autoclean coating. However, the majority of our irons will only produce steam when set on the 2 dot or 3 dot setting. When you look on your irons thermostat dial you will notice that the 2 dot and 3 dot settings have a shaded background, this indicates that the iron will produce steam when the dial is set inside this shaded area. Fill it up with the quantity indicated in the instructions for use and push spray button several times to fill the system complete. It is normal for the thermostat to turn on and off. It indicates the thermostat is working and your soleplate is being maintained at the desired temperature. If the autooff light blinks, you must disengage the autooff function. This is done by gently shaking the iron which will allow the iron to reheat. These are harmless and will quickly disappear. Some waterdrops could appeared underneath the ironing board and fall on the flooring. Please clean the Irons surface. Carry out the selfcleaning instructions in the instruction manual two or three times. If that hasnt resolved the problem, it may be that your iron needs repair. Please contact the service centre. There is nothing wrong with it.

If it still does not work, do not try to dismantle or repair the appliance yourself and take it to an approved repair centre. To avoid any danger, have it replaced by an approved repair centre. To turn the iron back on, gently shake it until the light goes out. Never use this type of product in the water tank see our recommendations regarding water to be used. Some residues could also been present in the steam chamber or on the soleplate; use the self cleaning function Depending model. All linen, especially new garments, must be washed and rinsed thoroughly to remove any soap and chemical deposits before you iron them. If these are not removed by washing they may appear later out of the soleplate in the form of small brown or white spots or streaks on your linen. A reason for sticking may be the use of starch. If you want to use starch, simply spray it on the reverse side of the garment, so that there is no contact between the soleplate and the starch. Clean the soleplate from rubber prints of fabric. Which always must be ironed on reverse side of the rubber prints. The amount of scale collected depends on the hardness of your water. Its active coating eliminates fibres and impurities that often become stuck to the plate and end up reducing its glide. Leave it at a local civic waste collection point. It should be steady and robust so that you can place the ironing appliance on it. If your iron has an autoclean function, refer to the instruction manual before using it. This is not only to avoid overheating of the iron or the surface on which it is placed but also to ensure that noone gets burned. If safety is one of your main concerns, choose an iron that has an automatic cutoff function. When storing, please remove as much water as possible and store in an upright position. For easier, noncorrosive cleaning of your irons soleplate, use a damp sponge on the soleplate while it is still warm.

Warning The use of iron cleaner will cause damage to your soleplates autoclean coating. However, the majority of our irons will only produce steam when set on the 2 dot or 3 dot setting. This is done by gently shaking the iron which will allow the iron to reheat. These are harmless and will quickly disappear. Some waterdrops could appeared underneath the ironing board and fall on the flooring. This function eliminates wasted steam while you are handling the clothes. What should I do Please clean the Irons surface. Carry out the selfcleaning instructions in the instruction manual two or

three times. Clean the soleplate from rubber prints of fabric. Which always must be ironed on reverse side of the rubber prints. The amount of scale collected depends on the hardness of your water. Its active coating eliminates fibres and impurities that often become stuck to the plate and end up reducing its glide. Leave it at a local civic waste collection point. Ask your question here. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Kim 5.0 out of 5 stars So, I was worried it would be the case with this charger too, but I was hopeful it would work, AND IT DOES. Im finally able to use my epilator againWorks well with my old model of the same epilator; though I do feel that the power of my old machine is perhaps not too notch anymore. However, this is not the fault of the charger; I just have a 67 year old machine. Works well and I am using it.Delivered fast and works perfect.Works fine! Charged quickly! Great service.We recommend that you do not solely rely on the information presented and that you always read labels, warnings, and directions before using or consuming a product.

Its proven epilation system removes hair at the root, leaving your skin smooth for weeks. As the hair that regrows is fine and soft, there will be no more

stubble. Thanks to its pivoting feature, it ideally adapts to the body contours, for better short hair removal and thoroughness. The massage system 1a stimulates the skin before and soothes it after the hair is pulled out to significantly reduce the pain sensation. The epilation head comes with two additional caps The Efficiency cap 1b for fast epilation ensures maximum skin contact, always taking care of the optimum usage position thanks to its pivoting feature. The beginner cap 1c also for sensitive skin reduces the epilation area so that less hair is removed per stroke. This gives you a gentle start in epilation. The narrow epilation head 8 is perfectly suited to follow the contours of delicate body parts such as under the arms and the bikini area. Its unique narrow and elevated tip allows for better visibility of the area to be epilated. Important For hygienic reasons, do not share this appliance with other persons.

This appliance is provided with a special cord set with an integrated Safety Extra Low Voltage power supply. Do not exchange or manipulate any part of it. Otherwise there is risk of electric shock. This appliance is suitable for cleaning under running tap water. Warning Detach the appliance from the power supply before cleaning any of the heads with water. This appliance is not intended for use by children or persons with reduced physical or mental capabilities, unless they are given supervision by a person responsible for their safety. In general, we recommend that you keep the appliance out of reach of children. When switched on, the appliance must never come in contact with the hair on your head, eyelashes, ribbons, etc. Never use the epilation head 2 without cap 1. This is a normal reaction and should quickly disappear, but may be stronger when you are removing hair at the root for the first few times or if you have sensitive skin. Using the preepilation wipes can help to prevent irritation. If, after 36 hours, the skin still shows irritation, we recommend that you contact your physician. In some cases inflammation of the skin could occur when bacteria penetrate the skin e.g. when sliding the appliance over the skin. Thorough cleaning of the epilation head before each use will minimise the risk of infection. If you have any doubts about using this appliance, please consult your physician. Some useful tips If you have not used an epilator before, or if you have not epilated for a longer period of time, it may take a short time for your skin to adapt to epilation. The discomfort experienced in the beginning will decrease considerably with repeated use as the skin adapts to the process. Epilation is easier and more comfortable when the hair is at the optimum length of 25 mm. If hairs are longer, we recommend that you either shave first and epilate the shorter, regrowing hairs after 1 or 2 weeks.

pikewallis.no/wp-content/plugins/formcraft/file-upload/server/content/files/162708333ed867---bostitch-n62fn-owners-manual.pdf

When epilating for the first time, it is advisable to epilate in the evening, so that any possible reddening can disappear overnight. To relax the skin we recommend applying a moisture cream after epilation. Fine hair which regrows might not grow up to the skin surface. The regular use of massage sponges e.g. after showering or exfoliation peels helps to prevent ingrowing hair as the gentle scrubbing action removes the upper skin layer and fine hair can get through to the skin surface. For best performance, we recommend that you always use a fully charged appliance. Using the special cord set, connect the appliance to an electrical outlet with the motor switched off. Charging time is approximately 1 hour. The green charging light 5a flashes to show that the epilator is being charged. When the battery is fully charged, the charging light shines permanently. Once fully charged, use the appliance without cord. When the red lowcharge light 5b comes on, connect the appliance to an electrical outlet via the special cord set to recharge. As a safety feature, it may happen that in a lowcharge mode, the appliance turns off. A full charge provides up to 40 minutes of cordless operation time. Optional skin cooling For the first few epilations or if you have sensitive skin, you can use the cooling application, recommended by dermatologists to help reduce possible skin irritation. Use only with glove. Put transparent cool side of the glove on your leg. Epilate the cooled skin area immediately. Repeat cooling and epilating until completion. While epilating, please

ensure your skin is dry. Important Apply cooling glove to the same area for no longer than 2 minutes. Keep away from sunlight. Do not use gel pack when damaged. Dispose of in household waste. Do not use if you are hypersensitive, allergic to the cold, or if your skin suffers from sensory disturbances, when suffering from cardiac diseases or arterial circulatory disorders.

Preparing the appliance Before use, always make sure that the epilation head is clean. Always make sure that the epilation head 2 is provided with a cap. To change caps, press their lateral ribs and pull off. To change heads, press the release button 6. **A How to epilate** 1 Turning on Press one of the lock keys and turn the switch clockwise to setting 2 optimum setting. For reduced speed, choose setting 1 soft setting. Always make sure that the epilation area between the massaging rollers is in contact with your skin. The pivoting caps automatically adapt to the contour of your skin. Guide the appliance in a slow, continuous movement without pressure against the hair growth, in the direction of the switch. As hair can grow in different directions, it may also be helpful to guide the appliance in different directions to achieve optimum results. The pulsating movement of the massaging rollers stimulate and relax the skin for a gentler epilation. If you are used to the sensation of epilation and prefer a faster way of removing hair, attach the Efficiency cap 1b replacing the massage system 1a. **3 Leg epilation** Epilate your legs from the lower leg in an upward direction. When epilating behind the knee, keep the leg stretched out straight. **4 Underarm and bikini line epilation** For this specific application, the narrow epilation head 8 has been developed. Thanks to its specific design adapted to the contours of these areas, it provides a gentle and thorough epilation. Please be aware that especially at the beginning, these areas are particularly sensitive to pain. With repeated usage the pain sensation will diminish. Before epilating, thoroughly clean the respective area to remove residues like deodorant. Then carefully dab dry with a towel. When epilating the underarm, keep your arm raised up so that the skin is stretched and guide the appliance in different directions. Prior to epilation, we recommend cleaning the skin with alcohol to promote good hygiene.

When epilating the face, stretch the skin with one hand and slowly guide the epilator with your other hand the direction of the switch. **Cleaning the epilation head** Before cleaning, unplug the appliance. Regular cleaning ensures better performance. **Brush cleaning** 6 Remove the cap and brush it out. 7 Thoroughly clean the tweezers from the rear side of the epilator head with the brush dipped into alcohol. While doing so, turn the tweezer element manually. This cleaning method ensures best hygienic conditions for the epilation head. **Cleaning under running water** 8 Remove the cap. Thoroughly shake both, the epilation head and the appliance to make sure that remaining water can drip out. Leave both parts to dry. Before reattaching, make sure that they are completely dry. For best results, always make sure that both, the shaver foil b and the trimmer c are in contact with the skin **A. Keeping your skin stretched** B, slowly move the appliance against the direction of hair growth. The trimmer first raises all long hairs and cuts them off. Then the flexible foil follows to smooth away any stubble. When shaving or trimming in sensitive areas, make sure that you always keep your skin stretched to avoid injuries. Hold the appliance with the OptiT rim comb lying flat on the skin. Guide it with the comb tips against the hair growth as shown in illustration C2. N.B. As hair does not always grow in the same direction, also guide the appliance slightly diagonally or in different directions in order to achieve best results. **Cleaning the shaver head** After each use, unplug the appliance. **Brush cleaning** Press the release buttons d to remove the shaver head D1. Tap the bottom of the shaver head gently on a flat surface not on the foil. Brush out the cutter block and the inside of the shaver head. However, do not clean the shaver foil with the brush as this may damage the foil. **Cleaning with water** Press the release buttons d to remove the shaver head.

Rinse the shaver head and the cutter block separately under running water D2. Leave the cutter block and the foil frame to dry separately before reattaching them. Keeping your shaver head attachment in top shape The shaving parts need to be lubricated regularly every 3 months E. If you

clean the shaver head under running water, please lubricate it after every cleaning. Then remove the shaver head and also apply a tiny amount of vaseline as shown in picture section E. The shaver foil and the cutter block are precision parts that wear out with time. To maintain optimum shaving performance, replace your foil and cutter block when you notice a reduced shaving performance. Do not shave with a damaged foil or cord. How to replace the shaving parts Shaver foil Press the release buttons to remove the shaver head. To remove the shaver foil, press the foil frame F. To mount a new one, insert it from inside the shaver head. Replacements parts shaver foil, cutter block can be obtained from your retailer or Braun Customer Service Centres. For electric specifications, please see printing on the special cord set. The special cord set automatically adapts to any worldwide AC voltage. Environmental notice This product contains rechargeable batteries. In the interest of protecting the environment, please do not dispose of the product in the household waste at the end of its useful life. Disposal can take place at a Braun Service Centre or at appropriate collection points provided in your country. Guarantee We grant 2 years guarantee on the product commencing on the date of purchase. Within the guarantee period we will eliminate, free of charge, any defects in the appliance resulting from faults in materials or workmanship, either by repairing or replacing the complete appliance as we may choose. This guarantee extends to every country where this appliance is supplied by Braun or its appointed distributor.

This guarantee does not cover damage due to improper use, normal wear or use as well as defects that have a negligible effect on the value or operation of the appliance. The guarantee becomes void if repairs are undertaken by unauthorised persons and if original Braun parts are not used. To obtain service within the guarantee period, hand in or send the complete appliance with your sales receipt to an authorised Braun Customer Service Centre. Por favor, lea atentamente las instrucciones antes de utilizar el aparato y guardelas para una posible consulta posterior. Su sistema de depilacion probado elimina el vello de raiz, dejando la piel suave durante semanas. Ademas, cuando el vello vuelve a salir, crece fino y suave, sin los efectos del afeitado tradicional. El accesorio del cabezal pivotante se adapta perfectamente a las formas del cuerpo, lo que permite eliminar mejor y de forma mas minuciosa el vello mas corto. El sistema de masaje 1a estimula la piel antes y despues de la depilacion para minimizar al maximo la sensacion de tirantez. El cabezal de depilacion de raiz se entrega con dos accesorios adicionales Accesorio de posicionamiento 1b se ajusta perfectamente al contorno de tu cuerpo, para una sesion de depilacion rapida y placentera. El cabezal de depilacion de raiz de zonas sensibles 8 es muy adecuado para depilar los contornos de las partes mas delicadas del cuerpo como las axilas o la linea del bikini. Con un numero menor de pinzas y su diseno estrecho, especialmente adaptado para estas zonas, resulta de facil manejar y asegura una depilacion particularmente suave de las zonas sensibles. El cabezal de precision 9 proporciona la maxima precision y control para eliminar el vello no deseado del rostro y otras zonas sensibles. Su excepcional estrechez y su punta elevada permiten una mejor visibilidad de la zona que se va a depilar.

El cabezal de depilacion de corte de zonas sensibles 10 esta especialmente disenado para una depilacion rapida y perfecta de las axilas y de la linea del bikini. Importante Por motivos de higiene, no comparta este aparato con otras personas. La depiladora esta provista de un cable de conexion especial con un suministro electrico integrado extra seguro de bajo voltaje. No cambie ni manipule ninguna de las partes de este cable de alimentacion, ya que existe el riesgo de sufrir una descarga electrica. Este aparato puede limpiarse bajo el grifo. Advertencia desenchufe el cable de la corriente electrica antes de limpiar ninguno de los cabezales con agua. Por norma general, recomendamos que mantenga el aparato fuera del alcance de los ninos. Cuando este en marcha, el aparato no debe estar nunca en contacto con el pelo o con la cabeza, las pestanas, etc., para evitar cualquier dano personal y tambien para impedir que se bloquee o que se estropee. No utilice nunca el cabezal de depilacion 2 sin una cubierta 1. Informacion general sobre la depilacion Todos los metodos de eliminacion del vello de raiz pueden causar el crecimiento del vello hacia dentro e irritacion cutanea

por ejemplo picores, molestias, enrojecimiento de la piel dependiendo de las condiciones del vello y de la piel. Esta es una reacción normal que debería desaparecer de una forma rápida, pero puede perdurar si se trata de las primeras depilaciones de raíz o si tiene una piel sensible. El uso de las toallitas predepilación puede ayudar a evitar la irritación. Si al cabo de 36 horas la piel todavía está irritada, le recomendamos que acuda a su médico. En algunos casos, se podría producir una inflamación cutánea si alguna bacteria penetrara en la piel por ejemplo al deslizar el aparato. Limpiar minuciosamente el cabezal de la depiladora antes de cada uso minimiza el riesgo de infección.

Consejos útiles Si usted no ha utilizado nunca una depiladora, o si no se ha depilado desde hace tiempo, es posible que su piel necesite un tiempo para adaptarse a la depilación. Las molestias que se sienten al principio disminuyen considerablemente con el uso continuado del aparato, ya que la piel se adapta al proceso de depilación. La depilación es más fácil y menos molesta cuando el vello mide entre 2 y 5 mm. Si el vello es más largo, le recomendamos que primero se rasure y que, al cabo de 1 o 2 semanas, se depile el vello que ha vuelto a crecer y que será más corto. Si se depila por primera vez, es preferible que lo haga por la noche, para que cualquier posible enrojecimiento pueda desaparecer durante la noche. Para aliviar la piel recomendamos que se aplique crema corporal después de la depilación. A veces, es posible que el vello fino que vuelve a crecer no llegue a la superficie de la piel. Para un mayor rendimiento aconsejamos que siempre la utilice con la batería totalmente cargada. Con el cable especial de conexión, conecte el aparato a la toma de corriente con el motor apagado. Tiempo de carga aproximadamente 1 hora. El indicador de carga de color verde parpadea para indicar que la depiladora ya está cargada. Cuando la batería está totalmente cargada el indicador de carga se permanece iluminado. Cuando la batería esté totalmente cargada, utilice el aparato sin el cable. Como medida de seguridad puede ocurrir si el aparato tiene poca batería, se apague. Una carga de batería completa supone hasta 40 minutos de funcionamiento sin cable. La mejor temperatura ambiental para cargar la batería es entre 5 °C y 35 °C. **Prepárese su piel** Su piel debe estar seca y libre de grasa o crema. Aplicación de frío opcional para las primeras depilaciones de raíz o si tiene piel sensible puede utilizar la aplicación de frío, recomendada por dermatólogos para ayudar a reducir la posible irritación de la piel.
